<i>Preface</i>	<i>xix</i>
<i>Acknowledgments</i>	<i>xxiii</i>

## **Part I. Introduction: Why Empirical Methods in Law? 1**

I. For Whom?	1
II. Why Now?	2
III. What Next?	5

### **Chapter 1: Thinking Empirically 7**

I. What Are Empirical Methods?	7
II. Thinking Empirically	10
A. Some Characteristics of Empirical Research	10
Robert Rosenthal & Ralph L. Rosnow, Orienting Habits of Good Scientific Practice	18
B. Some Limitations of an Empirical Approach	20
Conclusion	21
Exercises	22
Bibliography	23

### **Chapter 2: Research Design 25**

I. Generating Hypotheses	27
Social Science Resources	27
II. Selecting a Research Method	29
A. Description	29
B. Exploring Causation	30
C. Time	34
III. Validity and Reliability	36
A. Internal Validity	36
B. External Validity	39

C. Construct Validity and Operational Definitions	40
D. Reliability	42
Research Conducted in the Context of Litigation	43
IV. A Multi-Method Approach	46
David Hyman, Institutional Review Boards: Is This the Least Worst We Can Do?	48
Conclusion	49
Exercises	50
Bibliography	53
<b>Part II. How to Gather Data: Empirical Research Methodologies</b>	<b>55</b>
<b>Chapter 3: Asking Questions: Surveys and Interviews</b>	<b>59</b>
Hearsay Objections to Surveys	60
I. Examples	62
A. Example: Studies of Well-Being	63
B. Example: Trademark and Genericness	64
C. Example: Change of Venue	66
II. Designing and Evaluating Surveys	67
A. Who Are the Participants?	67
B. Drafting Questions	69
1. Relevance	70
2. Standardization	70
3. Types of Questions	71
Litigation Crisis Scale	74
4. Understandable, Non-Biased Questions	74
5. Questions that Respondents Are Able and Willing to Answer	76
6. Question Order	78
7. Skip Patterns	79
8. Pre-Testing	79
C. Methods of Conducting Surveys	79
Semi-Structured Interviews	80
1. Interviews	80
2. Questionnaires	82
Experience Sampling and Day Reconstruction	
Survey Methods	84
3. Choice of Method	84
Conclusion	85
Large-Scale Surveys	86
Exercises	88
Bibliography	91

<b>Chapter 4: Experimental Data</b>	<b>93</b>
I. Experimental Control and Random Assignment	93
A. Experimental Manipulations and Control Groups	95
1. Isolating Variables	95
Experiments in Trademark and False Advertising Cases	96
2. Manipulation Checks and Pilot Testing	97
3. Factorial Designs	99
B. Random Assignment	101
Fractional Factorial Designs	102
Between-Subjects and Within-Subjects Designs	104
II. Field Experiments	106
Airlines, Dispute Resolution, and Experiments	107
Shari Seidman Diamond, Neil Vidmar, Mary Rose, Leslie Ellis & Beth Murphy, Juror Discussions	
During Civil Trials: Studying an Arizona Innovation	109
III. Laboratory and Simulation Experiments	110
Philip G. Zimbardo, The Stanford Prison Experiment	112
IV. Quasi-Experiments	115
V. Natural Experiments	118
Steven D. Levitt & Stephen J. Dubner, Freakonomics	118
Cholera in London	120
Conclusion	122
Exercises	122
Bibliography	123
 <b>Chapter 5: Archival Data</b>	 <b>125</b>
I. Compiling Your Own Data	127
II. Using Existing Data Sets	128
Changes in Data Collection Procedures: Accident Reporting	133
III. Access to Data	134
Freedom of Information Act	135
Conclusion	136
Exercises	136
Bibliography	137
 <b>Chapter 6: Sampling</b>	 <b>139</b>
I. Why Sample?	140
II. Population to Be Studied	142
III. Types of Sampling	143
A. Probability Sampling	143
B. Nonprobability Sampling	148

IV. Sample Size	149
Irrelevance of Population Size	151
V. Sampled Evidence in Court	154
A. Acceptance of Samples in Court	154
B. Current Application: Sampling in Mass Torts	155
Conclusion	157
Exercises	158
Bibliography	163
<b>Chapter 7: Coding</b>	<b>165</b>
I. What Is Coding and Why Do We Care?	166
II. Assembling a Database	169
Statistical Programs	171
III. Coding Data into Variables	172
A. General Issues About Variables	172
Coder Effects	174
B. Specific Best Practices for Coding	175
Imputation of Missing Values	178
IV. Ensuring the Reliability of the Database	180
Conclusion	183
Exercises	183
Bibliography	187
<b>Part III. How to Evaluate Data: Statistical Techniques</b>	<b>189</b>
<b>Chapter 8: Distributions and How to Describe Them</b>	<b>191</b>
I. “The Data Are . . .” (Or How I Learned to Love the Data and Think About Them as a Distribution)	191
II. Summarizing Data (Or How I Learned to Stop Worrying and Think Beyond the Average)	196
A. Measures of Central Tendency	196
William D. Henderson, Are We Selling Results or Résumés? The Unexplored Linkage Between Human Resource Strategies and Firm-Specific Human Capital	199
B. Describing the Variation in the Data	201
Standardization and Z Scores	204
C. Describing the Shape of the Data	205
Leptokurtosis, Fat Tails, and the Financial Meltdown	208
III. Some Probability Distributions (Or How I Learned to Stop Worrying and Be Normal)	209
A. The Binomial Distribution	209

B.	The Normal Distribution	213
	<i>Board of County Commissioners v. Water Quality Control Commission</i>	216
C.	Transformations	217
D.	Outliers	221
	Conclusion	223
	Exercises	223
	Bibliography	226
Chapter 9:	<b>Hypothesis Testing and Statistical Significance</b>	<b>227</b>
I.	Learning by Falsification & the Null Hypothesis	227
II.	How Certain Do You Have to Be? The Concept of Statistical Significance	231
III.	Moving Beyond the Binomial	235
	Publication Bias and File Drawers	236
	Meta-Analysis	240
	Conclusion	242
	Exercises	243
	Bibliography	244
Chapter 10:	<b>Inferential Statistics</b>	<b>247</b>
I.	The Chi-square ( $\chi^2$ ) Statistic	248
A.	Calculating the Chi-square Statistic	248
	Joint Frequency	250
	Pearson vs. Yates and Continuity Corrections	252
B.	Chi-square with More Than Two Categories	254
C.	Assumptions of Chi-square	258
D.	Examples and Applications	261
	<i>NAACP v. City of Mansfield</i>	262
	Judicial Notice of Chi-square?	264
II.	Student's $t$ -statistic	265
A.	Calculating Student's $t$	265
	One- and Two-Tailed Tests as Applied to the Bloom County Problem	270
B.	Assumptions of the $t$ -test and Some Tips for Its Use	270
	1. Unequal Variances	271
	2. Normality	271
	3. Paired Samples	274
	4. Dividing into Halves, Quantiles, or Other Groups	275
III.	ANOVA and the $F$ -statistic	277

A. ANOVA and Calculation of the $F$ -statistic	277
B. Assumptions of ANOVA and the $F$ -statistic	281
1. Normality	282
2. Homogenous Variance	282
C. Factorial ANOVA	282
D. Examples and Applications	283
Jennifer K. Robbennolt, Apologies and Legal Settlement: An Empirical Examination	283
Conclusion	285
Exercises	285
Bibliography	288
<b>Chapter 11: Correlation and Regression Analysis</b>	<b>289</b>
Causal Inference	290
I. Associations Among Variables	291
A. Scatterplots	291
B. Covariance and Correlation	293
1. Covariance	293
Anscombe's Quartet	294
2. Correlation	297
II. Regression	300
A. Simple Linear Regression: The Concept	301
B. Simple Linear Regression: An Example	304
C. Simple Linear Regression: Goodness of Fit and Measuring Statistical Significance of the Coefficients	306
1. Goodness of Fit	306
2. Statistical Significance of the Coefficient	310
D. Multiple Regression	312
1. Generally	312
2. Multiple Regression: An Example	313
3. Comparing Multiple Regression Models	318
E. Things To Watch for and Things That Can Go Wrong	319
1. Violations of the Assumptions Regarding the Error Terms	320
a. Heteroskedasticity	321
b. Serial Correlation	323
2. Omitted Variable Bias	324
3. Multicollinearity	326
Omitted and Included Variables in Discrimination Analyses	328
4. Causality	330

<b>Contents</b>	<b>xvii</b>
Conclusion	330
Exercises	331
Bibliography	333
<b>Chapter 12: Specialized Regression Techniques</b>	<b>335</b>
I. Nonlinearities, Transformations, and Interactions	336
A. Nonlinearities Generally	337
B. Transformations Again	339
C. Interactions	343
II. Limited Dependent Variables	344
A. Categorical Dependent Variables: Logit and Probit Regression	345
B. Censored Dependent Variables: The Tobit Regression	350
C. Truncated Dependent Variables	352
III. Multilevel Models (Hierarchical Linear Modeling)	353
IV. Data That Span Time Periods	354
A. Time-Series Data	354
B. Panel Data	356
V. Using Instrumental Variables to Deal with the Problem of Simultaneity	357
A. Instrumental Variables	358
B. Two-Stage Least Squares Regression (2SLS)	360
Conclusion	361
Exercises	362
Bibliography	364
<b>Part IV. Communicating Your Results: Writing About and Presenting Empirical Matters</b>	<b>367</b>
<b>Chapter 13: Communicating Empirical Results</b>	<b>369</b>
I. Writing About Empirical Matters	369
A. Some General Considerations	369
B. Displaying Data: Tables and Figures	373
1. Tables	375
2. Figures	378
II. Presentations	387
A. Oral Presentations of Empirical Research	388
B. Presentation Software	390
Conclusion	391
Bibliography	392

Chapter 14: <b>Conclusions</b>	<b>395</b>
I. What Have We Learned?	395
II. The Biased Assimilation of Empirical Studies	397
III. The Promise of Empirical Methods in Law	399
Conclusion	401
Bibliography	401
<i>Glossary</i>	<i>403</i>
<i>Index</i>	<i>431</i>
